

The Simple Solution ...To replace your plastic card system

A Hospital and Healthcare System can now quickly, easily and economically update from their embossing system to an improved technology-driven patient identification system that produces labels with or without bar codes 24/7. **Patient ID XPress™** is the first logical step towards the ultimate automated solution of e-forms. The **Patient ID XPress™** Data Capture Station converts your existing embosser data stream into PDF417 Patient Label.

PDF 417 'Master Label'

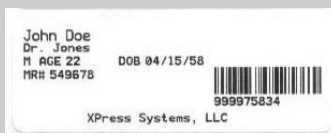

The 'Master Label' is used the same as the embossed blue card, and is easily

scanned to produce both your (bar coded) wristbands and patient documentation labels.

Wristbands and patient labels are customized to your Hospital Information requirements.

Patient ID XPress™ Label Stations and Wristband Stations are off-line printers that are

placed in Nurses Stations, Emergency, Outpatient, Labor & Delivery, anywhere you have admissions or administer patient care.

Sample Patient Label

Meeting the Standards

Positive patient identification is not just a Hospital's mission, but now is part of a growing legislative mandate for patient safety. Plastic card embossing systems and document imprinting are quickly being phased out and replaced by technology-based systems.

Since January 2004, **JCAHO** will be surveying facilities for the procedure of having at least two patient identifiers whenever taking blood samples or administering medications and blood products. In addition the **FDA** has issued a final rule that requires bar codes on most prescriptions for positive patient identification when dispensing drugs.

Is Your Hospital Ready?

Patient ID XPress™ provides your Hospital and staff an easy and simple turnkey solution for implementing barcode wristbands and documentation labeling using your existing embossing system. **Patient ID XPress™** requires minimal IT involvement for it's installation and implementation.

Still Trying To Read These?

Replace those faded, hard-to-read patient imprints with clear, card coded labels for all your patient documentation. No longer will you be wasting materials costs by having to produce an entire sheet of labels to get just one label. With just a quick scan, **Patient ID XPress™** Labeling System prints just the number of

patient labels you need when you need them and where you need them. No more patient identification problems or data entry errors associated with poor patient imprints.

Supports 24/7 Operation

On-line and Off-line Data Capture Stations keeps your facility running 24 hours a day.

Patient ID Xpress™ produces wristbands and patient documentation labels on off-line printers by scanning the 'Master Label'. The unique, Off-Line Data Capture Station allows hospitals and healthcare facilities to produce Patient ID Labels using a keyboard with a built-in digital readout for data entry.

*When your Hospital System is down..
Patient ID Xpress™ keeps working!*

The Off-Line Data Capture Station is a small, self-contained system that fits anywhere in your department
